Automated Testing system

STEERED Technology

Versatile, Flexible, Economical.

With a newly developed test setup for interconnects we raise our testing capabilities to the next level.

The core of this new testing setup is a Keysight Data Acquisition System, supported with a Keysight programmable power supply and flexible interface developed in house.

This setup, integrated in a cabinet with front IO's gives us more flexibility and allows more complex versatile testing.

FEATURES AND BENEFITS

- Multichannel testing allows many positions of the same interconnect to be tested simultaneously.
- Programmable setup of type of test, sequence and conditions allows complex testing processes and automatic, high resolution, data storage.
- Integrated safety monitor stops the sequence in case of emergencies while storing the measurements.
- Easy accessible front panel mounted IO’s allow for easy connecting of the required sensors and measurement points.
- In combination with the climate chamber temperature cycling testing up to 300 ˚C are possible.
